LOCAL MINING REVIEW.

For the Week Ending March 22, 1973.

Ore Shipments Again Regular—The

Feeling in regard to stocks—Develop-

ment in Outside Districts—Bullion

Shipments—Operations of the Picoche

Company.

The weather has been mild and pleas-

ant all week, and ore shipments to the

mills have again become regular; but it

will require many weeks to clear the

dump-piles of the principal mines. It is

estimated that the ore still at the Ray-

mond & Ely dumps is worth fully a

quarter of a million.

There is greater activity in the local

stock market than has been manifested

at any time in the preceding three

months. The general disposition is to

change investments from one corporation

to another, rather than to make close-out

sales. Those who have invested in Ray-

mond & Ely, Meadow Valley, Picoche

and Hunt have manifested an un-

wavering disposition to hold on through

all the recent fluctuations in San Fran-

cisco quotations. Pacific Tunnel stock

is in quest, but seldom obtained, at the

figures it commanded when last on the

Boards. In short, the feeling here in

WASHINGTON AND CREOLE.

No new developments of importance.

About two tons of ore a day being hoisted,

and about 175 tons on the dump. The

assays vary, but there is no doubt that

the mill yield will not fall far short of

\$100 to the ton. The rock has become soft-

er, and much better progress than usual

is being made in the shaft and drifts.

Since the introduction of the air pipes,

the main shaft from the 340-foot level to

the bottom has been partitioned, thus in-

creasing thorough ventilation in all parts

of the mine.

MEADOW VALLEY.

We know but little about this mine,

save from hearsay; but "common

report" among practical miners says

it is one of the "biggest things" in the

State—or, rather, that millions are "in

sight," which will be hoisted some time

this summer. We give these stories for

what they are worth; but are confident

the machinery owned by the Meadow

Valley Company, to say nothing of the

mine, is worth more than the stock

now calls for.

RAYMOND AND ELY.

Not less than 900 tons of ore have been

delivered at the mills during the week,

two-thirds of which is first-class. From

115 to 120 tons a day are being hoisted.

The ore breasts never looked better—are

good in all parts of the mine. The

stopes are all being worked to the fullest

extent. About 400 men are working in

and about the mine. Work is being

pushed with all energy in the drift from

the 8th level.

POCHE.

Ore has been reduced at the Magnet

mill during the week, but the returns

have not been all received. There are

still 150 tons of good ore on the dump,

which, judging from the yield so far,

ought to pulp over \$150 to the ton.

Usual quantities continue to be hoisted,

and the mine continues unchanged. Full

forces engaged.

BUCKNER.

From 10 to 15 tons of high grade ore

are being shipped daily to the Magnet

mills. Large quantities of ore continue

to be brought to the surface. The main

shaft is down 280 feet. Work is being

pushed in the drifts to make connection

with the winzes, good progress being

made. Ore bodies large.

ALPS.

The drift from the 160-foot level has

cut a 4-foot vein of very rich ore, some

of the assays running up to \$500 to the

ton. The ledge dips to the south. The

ore breasts in all parts of the mine are

looking well. The drift at the 300-foot

level is in 34 feet.

MONTANA.

This mine is looking better now than

ever before. Few mines in the district

expose a better defined or larger vein.

It is now thoroughly developed, and

machinery is all that is needed, in our

judgment, to put it on equal footing with

the best.

FEATHER.

The ledge is widening out at two

points, the ore maintaining its average

richness. Still drifting on the ledge, and

the vein continues to yield high-grade

ore throughout an extent of 150 feet.

There are large bodies exposed.

CHIEF EAST EXTENSION.

Little change to note. Some fine ore

is now being hoisted, the ore body seem-

ing to be permanent and improving. The

shaft is now down 110 feet below the 90-

foot level, and work continues with full

forces.

STAR OF THE UNION.

The vein under which the incline runs

was tapped 210 feet from the surface,

and a quantity of ore was extracted for

DISTRICT COURT PROCEEDINGS.

SATURDAY, March 22, 1873.

The Court met pursuant to adjourn-

ment, when the following business was

transacted:

State vs. John Hagerty—Entering of

judgment and passing of sentence post-

poned until Saturday, March 29.

Belle Earle vs. W. S. Travis—Demur-

rer of defendant sustained; plaintiff al-

lows to the ruling; plaintiff allowed

twenty days to file amended complaint.

The hearing of the application of Re-

becca Pyle to become a sole trader con-

tinued until March 29.

The hearing of the objections to the

referee's report in the matter of the

estate of J. J. Monahan is continued

until March 29.

J. C. Foster is appointed referee to

take testimony in regard to the will of

Joseph Debinger; report to be made on

March 29.

Judgment by default decreed to James

Cronan against Wm. Dooley in the sum

of \$142 90, with interest and cost of suit.

Error of judgment corrected in the case

of H. White vs. J. Hooper, allowing

plaintiff a year's additional interest, at 10

per cent., on the sum of \$744 25.

John Goodman, indicted for rape, and

convicted of assault on his own confession,

on Frances Ann Down, was fined \$360,

to be confined in the county jail for six

months in default of payment. He was

recommitted.

Raymond & Ely M. Co. vs. Hermes M.

Co.—Defendants allowed to amend their

answer to the amended complaint, but

plaintiffs may, either in this court or on

appeal, take any objection to the matter

of said amendments which could be taken

on special demurrer. Ordered that said

amendments be filed and considered en-

grossed.

AN OLD PIUTE WOMAN LEFT TO DIE.

About eleven o'clock yesterday forenoon

an old Piute squaw, apparently between

50 and 60 years of age, was discovered in

the brush out on the valley about a mile

north of the city, without food, water,

clothing or attendants, and too weak to

stand without assistance. She had evi-

dently been left there by her brutal rival

relations to die. The poor creature said,

indicating the idea by extending the fore-

fingers and thumb of her right hand,

that she had not drunk water for "five

days." She was almost in a state of

weakness, a little strip of rabbit skin

robe being all she had to protect her

from the chill night air. She was found

by Myles A. Knapp, who promptly re-

ported the case at the hospital. Mr.

Williams, the steward, immediately sup-

plied her with nourishment and neces-

sary medicine. The benefits of the poor

fund are not supposed to be extended to

the Indians, as they are the wards of the

honest and tender-hearted Christian

missionaries of the General Govern-

ment; but the hospital authorities will

take the responsibility of fitting up a

couch for her under the institution, and

feeding and caring for her until the In-

dian agent, down on the Muddy, has an

opportunity to decide whether he will

provide for the unfortunate being, or

leave her to starve. This is the second

case of the kind in the last few weeks.

We don't know what the agent went

down to the Muddy for, unless to get out
